

techmums

Empowering women through technology

#techmums is here to take the mystery out of technology. We know that when a woman harnesses the power and the potential of the digital world, her confidence increases. And we also know that not only helps her, but also her children and her wider community.

Our workshops are free to attend, and require no previous knowledge. We give the participants tasters of everything from social media to online safety, email use to app building.

"I am not just a mum, I am a person who can go out and achieve something for myself. Since I joined #techmums I've signed up to do my maths GCSE and applied for and got a job."

– Lisa, #techmum

WHO?

#techmums was founded by Dr Sue Black. She bought her own family out of poverty though a PhD in Computing, and was inspired to spread the word about the life-changing power of technology education.

WHY?

The key determining factor in a child's success at school is the mother's education and the home environment: we want to create tech savvy mums and families so that we have the greatest and fastest impact.

WHERE?

#techmums is currently running in Essex and at schools and colleges in Tower Hamlets, Nottingham, London and Dublin. The aim is to expand across the UK, particularly in the areas with the greatest social deprivation.
